## Thanks to our supports

## Scientific program is available!

You will find the details of the scientific program on the website <https://ess16.sciencesconf.org/>.

Due to the unbalance of the proposals, it was not possible to keep dedicated days for given sessions, but you will have plenty of information with 4 plenaries, 9 invited lectures, 51 oral communications and 53 posters! More than 30 countries will be represented! The poster list will be available soon: recommended poster size is A0.

**REGISTER NOW!**

Please check your registration and payment method by finalizing the process up to the end as soon as possible. Payment upon arrival may induce additional charges if you do not have an agreement of ESS16 organization.

## Ultrasonics Sonochemistry Special Issue

We are pleased to remember you that all scientific communications presented during the conference (plenary and invited lectures, oral and posters communications) may be submitted for a special issue of the Journal Ultrasonics Sonochemistry (Elsevier editions: impact factor 4.218).

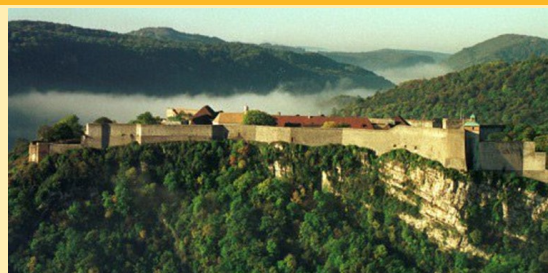

Please note that the submission process will start soon after the conference.

## Social program and visits

All lunches from Monday 16th to Thursday 19th and Monday, Tuesday and Wednesday dinners are included in the registration fees, for academic/industrial as well as students. The fees also include special events in the evenings, and the visit and gala diner of Wednesday at the citadelle of Besançon!

<http://www.citadelle.com/en/>

Guided tour in English and French and full access to the fortress and its museum! Social program for accompanying person is available: please contact ESS organizing committee.

## Practical information

Reaching Besançon is easy from Paris. From Roissy Charles de Gaulle airport which is connected to railways, there is one direct connection but only once a day in the evening. Alternatively, you must go to Paris-Gare de Lyon railways station. It is better to arrive in Besançon Viotte rather than Besançon Franche Comté TGV, because this is closer to the town (shuttle exists between both Besançon stations). From the other regional airport (Basel or Lyon, connections are also possible).

**Applications:**  
 Emulsification, homogenizing, degassing, suspending, cell disruption, accelerating reactions, sonochemistry, OH radicals, disperse, ultrafine cleaning, water- und wastewater, aerosol until 4 MHz - nanotubes

**These are some of our customers:**  
 Sonochemistry Centre at Coventry University;  
 National Research Council of Canada;  
 Fraunhofer Institut; Helmholtz Berlin;  
 University College Cork, Ireland; University of Melbourne, CISRO Australia; Kaunas University, Lithuania; University of Abertay, Dundee Scotland; GKSS Polymer Research, Germany INPT-ENSIACET, Toulouse France; AMF, CPS, LITEC Zaragoza, Spain; Bogazici University Turkey, University of Applied Sciences Cologne; Ocean Research Centre, Japan; Petrobras, Brazil/US; Geomar Kiel, and different universities in Greece, GB, USA, Colombia, Saudi Arabia, New Zealand, Turkey, Argentina, Germany...  
 and companies such as Dupont, Degussa ATOTECH Germany, DLR, Bosch, Daimler, DreyerBosse, Ab.Solar, ADO, Daimler AG

today

High power ultrasound for research and industries!

**MEINHARDT Ultrasonics since 1950**

We develop, produce and supply ultrasonic-transducer/generator systems within megahertz range for innovative tasks in the laboratory and mini planning.

The **transducer E/805/T** is operable in continuous mode and also in the effective impuls/burst mode.

**for example:**  
 Connected to the **glass reactor, UST 02** transforms into a working unit, which works well in the areas of physics, chemistry, medicine, biotechnology - research.

**for example:**  
 Surface mounting on one photo-/sonoreactor results in a unit working as a technical school plant.

special glas reactor with cooling jacket and diffuser

**NEW**  
 multifrequency system MFLG - touch panel, temp. control, usb, short digital impuls and sweep modus
